## DETAILED ACTION

The following action is in response to the amendment received April 6, 2006.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 13, and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wemp('109) in view of Kraft('086). Wemp discloses a disk with a core plate each side of which is provided with a friction lining. Resilient portions of the core plate are bent to form a disk having increasing thickness in the radial direction. The resilient portions deflect such that after engagement the disk has sides that are parallel to the

remainder of the core plate. Kraft provides a disk having a core plate 8 and a friction lining 9 that is itself compressible to conform to the shape of the engaged surface. In view of Kraft, it would have been obvious to provide friction material in Wemp that increases in thickness in the radial direction and upon engagement is compressed to be parallel to a planar core plate, the motivation being to permit the use of a simplified core plate in the Wemp device while still retaining the progressive clutch engagement.

***Allowable Subject Matter***

Claims 1, 4-7, 10-12, and 18 are allowed.

***Response to Amendment***

The objection to claim 1 is withdrawn in view of the amendment to the claim.

The amendments to claims 5 and 11 overcome the rejection based on 35 USC 112, second paragraph. Accordingly, the rejection is withdrawn.

After reconsideration and in view of applicants' amendments, the rejection of claims 1, 4, 5, 10-12, and 18 is withdrawn. Additionally, the rejection of claims 6 and 7, based on 35 USC 103(a) is withdrawn. The rejection of claims 13 and 14 under 35 USC 102(b) based on Russell('424) is withdrawn in favor of the new rejection under 35 USC 103(a) stated above.

Art Unit: 3681

***Response to Arguments***

Applicant's arguments with respect to claims 13 and 14 have been considered but are moot in view of the new ground(s) of rejection.
